

Hesaplamaa Growth Opportunity Engine

Google Ads API Token Application - Design Documentation

Prepared for Google Ads API review. This document explains how Hesaplamaa.com uses Google Ads API data, what product workflows are supported, and which Google Ads actions are explicitly not supported.

Company / Website	Hesaplamaa / https://hesaplamaa.com
Tool name	Hesaplamaa Growth Opportunity Engine
Primary API use	Keyword planning metrics for internal SEO and calculator content planning
User access	Internal administrator users only
Campaign management	Not supported. The tool does not create, edit, pause, or optimize Google Ads campaigns.
Requested capability	Keyword Planning Services only

1. Product Overview

Hesaplamaa.com is a Turkish website that provides free online calculators for finance, health, time, salary, tax, education, and daily life topics. The Growth Opportunity Engine is an internal WordPress admin tool used by the site owner to identify new calculator page opportunities.

The tool combines Google Search Console data, Google Suggest ideas, AI-assisted topic expansion, and Google Ads keyword planning metrics. Its goal is to help internal administrators decide which calculator pages should be created next based on search demand, competition, and website coverage gaps.

2. Google Ads API Usage

The Google Ads API is used only to retrieve keyword planning metrics. The tool sends calculator-related keyword ideas to the API and stores read-only metrics such as average monthly searches, competition level, and monthly search volume ranges when available.

The API data is displayed inside the internal admin screen called "Yeni Hesaplama Fikirleri" so the site owner can prioritize content production. The tool does not automate advertising activity and does not interact with campaigns, ad groups, ads, budgets, bids, assets, audiences, conversions, or remarketing lists.

API area	Purpose	Write actions?
----------	---------	----------------

Keyword Planning Services	Retrieve keyword historical metrics for calculator-related topics.	No
Campaign Management	Not used. Campaign creation and management are not part of the product.	No
Reporting	Not used for advertising performance reports. The tool only reads keyword planning metrics.	No

3. Main Product Workflow

The workflow is intentionally simple and internal. An administrator enters a topic such as "finance", "health", or "time". The system generates relevant calculator keyword ideas, checks whether matching pages already exist, requests keyword planning metrics, and ranks the opportunities.

Step	User action / system behavior	Google Ads API role
1	Admin opens the New Calculator Ideas screen in WordPress.	None
2	Admin enters a topic or scans default calculator opportunities.	None
3	System builds keyword ideas such as "loan calculator", "body mass index calculator", or Turkish equivalents.	None
4	System requests keyword historical metrics for the generated keyword list.	Read-only keyword planning request
5	Admin reviews opportunity score, search volume, competition, and page availability.	Metrics displayed for decision support
6	Admin manually decides whether to create content or a calculator page.	No Google Ads action

4. Data Flow and Storage

The integration uses server-side OAuth. The refresh token and API credentials are stored in the WordPress admin settings and are not exposed to public visitors. API calls are initiated from the server side by an authenticated administrator. Public site visitors cannot trigger Google Ads API calls.

Data element	Source	Use in product
Keyword text	Internal topic discovery, Google Suggest, AI topic suggestions, and existing site analysis.	Sent to Keyword Planning Services to retrieve metrics.
Average monthly searches	Google Ads API	Displayed as search volume in opportunity cards.
Competition level	Google Ads API	Displayed as low, medium, high, or unknown competition.
Opportunity score	Internal calculation	Used to prioritize suggested calculator pages.

5. User Access and Permissions

The tool is available only inside the WordPress administrator area. It is intended for internal users who manage Hesaplamaa.com content and SEO planning. It is not a public SaaS tool and is not offered to external clients or the general public.

Only users with administrator-level WordPress access can configure Google Ads API credentials, connect OAuth, run keyword metric checks, and view API-derived data.

6. Compliance Boundaries

The product is designed as a read-only keyword research and content planning system. It does not provide account creation, campaign creation, campaign management, bid management, ad creation, ad approval, conversion tracking, remarketing, billing, or audience management features.

Capability	Supported?	Notes
Keyword Planning Services	Yes	Used to retrieve keyword volume and competition metrics.
Account Creation	No	The tool never creates Google Ads accounts.
Account Management	No	The tool never changes account settings.
Campaign Creation	No	The tool never creates campaigns.
Campaign Management	No	The tool never edits campaigns, budgets, bids, ad groups, ads, or targeting.
App Conversion Tracking / Remarketing	No	The tool does not use conversion tracking or remarketing APIs.

7. Screens and Interface Summary

The internal interface contains the following screens and controls. These screens are used only for research, prioritization, and manual content planning.

Screen / component	Purpose
Google Ads API settings	Stores developer token, customer ID, OAuth refresh token, language, and location settings. Includes a server-side connection test.
New Calculator Ideas	Shows opportunity cards with keyword, monthly volume, competition, site availability, and opportunity score.
Opportunity detail panel	Explains why a keyword is important and suggests whether a content page or calculator tool should be created.
Existing page analysis	Uses Search Console and WordPress data to understand existing pages and avoid duplicate calculator opportunities.

8. Example Use Case

An internal admin enters the topic "health". The system suggests calculator ideas such as body mass index calculator, calorie calculator, pregnancy week calculator, water intake calculator, and ideal weight calculator. The tool then retrieves keyword planning metrics and highlights which calculator pages are missing from Hesaplamaa.com.

The administrator reviews the metrics and manually decides which calculator page to create. No Google Ads campaign is created or modified during this process.

9. Form Answers Reference

For the token application form, the accurate capability description is:

Campaign types supported: None. This tool does not support Google Ads campaign creation or management. It only uses Keyword Planning Services for keyword research metrics.

Google Ads capabilities provided: Keyword Planning Services only.

10. Summary

Hesaplamaa Growth Opportunity Engine requests Google Ads API access for a limited, read-only SEO and keyword planning use case. The API is used internally to improve calculator content planning with search volume and competition data. The tool does not manage advertising campaigns or make any changes to Google Ads accounts.
